Deutsche Bank, "Treasury Pulse" Weighing the Advantages of Remote Deposit Capture

Check 21, which beginning last fall made substitute checks or image replacement documents legally equivalent to original paper checks, has opened a new era for electronic payments. As a result, many applications and payment options being offered now could have a strategic impact on your business.

One such application is remote deposit capture, the practice of converting paper deposits into electronic images of checks at a business location and transmitting them to a bank for deposit and clearing. Once banks receive these electronic deposits, they are now able to choose how the

images will clear—either as substitute checks, through image exchange or by Accounts Receivable Conversion (ARC) using the Automated Clearing House (ACH) payments network where applicable. This process, also known as "dynamic clearing," is rapidly becoming the method of choice in check payments processing.

Ask Strategic Questions

Deciding to adopt remote deposit capture involves many considerations. You must make strategic assessments regarding the typical location and volume of checks received, the value of those checks, the location of the

paying bank, the ability of the company to properly store and destroy original paper checks, the development and implementation of internal controls and sorting procedures, and the nature of the hardware and software investment necessary.

Upstate, Press Release Upstate releases Western Blotting detection kits

Western blotting has become one of the most common protein analysis techniques used in biomedical research today. It provides a non-radioactive, direct method for identifying proteins in a mixture, as well as determining the relative amount of specific proteins in different samples.

While variations on standard Western blotting techniques are numerous, its accuracy ensures

it remains the most popular of the options available. In general, a complex protein mixture (such as a cell lysate, cell extract or purified protein preparation) is fractionated on a gel (e.g. SDS-PAGE, native PAGE, IEF or 2-D PAGE) by electrophoresis.

After separation, proteins are transferred to a membrane, which can be nitrocellulose or polyvinylidene fluoride (PVDF).

LaSalle Bank, "Cash Solutions" NACHA rule allows conversion of some business checks

Will my check be converted? According to a recent Association for Financial Professionals survey, 86 percent of businesses currently use 9-inch check stock containing the auxiliary on-us field, making these checks ineligible for conversion.

LaSalle is one of the country's largest check-clearing banks. Its default check specifications call for the automatic population of the check number in the auxiliary on-us field for controlled and non-controlled disbursements, making these checks ineligible for electronic conversion. Consequently, if your checks use LaSalle's default format, they

are not eligible for conversion. If you have chosen checks that deviate from the default format, they may qualify for conversion beginning September 15. LaSalle suggests reviewing your check stock with either the Bank or your printing company. If you wish to opt out of conversion, you may need to change your check stock and printing specifications.

Another way to opt out of conversion and ensure your item is not converted is to contact your trading partners and ask them not to convert checks mailed to a lockbox or placed in a dropbox.

Clymer HEALING CENTER
Chronic Fatigue Syndrome (CFS)

Before the constellation of symptoms that comprise CFS had an official name, professionals at the Clymer Healing Center called it Adrenal Fatigue. The concept proved to be a link between the adrenal gland and the immune system in response to the long and protracted fatigue that can plague thousands.

CFS and related metabolic syndromes strike hard in the stressful, toxic and time-starved world of the 21st Century. Women seem the hardest hit and it seems to be spreading to men. It's a life-altering condition and unless the cause is found, it can be devastating.

Many traditional medical practitioners treat symptoms, primarily with the "prescription of the 50's" - the "Big 3" - antidepressants, sedatives and tranquilizers. They can cause more side effects. Others believe the condition is "all in the patient's head" or recommend the patient "learn to live with it." Finally, the fundamental connection of metabolic research.

The comprehensive program at Clymer Healing Center has helped thousands find a life-altering, long-term solution to the conversion fatigue. The path to long-term relief and well-being. The only real breakthrough.

"Before I sought help at the Clymer Center, I had been told I was 'just stressed' and 'I had to learn to live with it.' After just one session, I felt better. After just one week, I was able to go back to work. After just one month, I was able to go back to work. After just one year, I was able to go back to work. After just one year, I was able to go back to work." - Sharon Murray, patient

"I live in the UK and had been suffering from CFS for several years. I was told to try to 'live with it' and 'learn to live with it.' I found my way to the Clymer Healing Center and was able to go back to work. I was able to go back to work. I was able to go back to work. I was able to go back to work." - Stephen Hunt, patient

Specialists in treating patients with:

- Chronic Fatigue Syndrome
- Adrenal Exhaustion Syndrome
- Fibromyalgia
- Hormonal Imbalances
- Environmental
- Heavy Metal Toxicities
- Hypersensitivity Syndromes
- Temp Dysbarotaxia
- Allergies and Asthma
- Back and Neck Pain
- Chronic Sinusitis

Clymer Healing Center

Before the constellation of symptoms that comprise CFS had an official name, professionals at the Clymer Healing Center called it Adrenal Fatigue. Their research showed a vital connection between the adrenal gland and the immune system in creating the ill health and profound fatigue that still plagues thousands.

CFS and related metabolic syndromes strike hard in the stressful, toxic and time-starved world of the 21st Century. Women seem to be especially hard hit, as they juggle roles inside and outside the home – careers, children, spouses, aging parents, etc.
